EDUCATION

KIET Deemed to be University

B.Tech in Computer Science — 7.48 GPA

Ghaziabad, India

Oct 2023 - June 2027

Rani Laxmi Bai Memorial School

Class XII (ISC) — 84%

Lucknow, India

2021-2022

Rani Laxmi Bai Memorial School

Class X (ICSE) — 86%

Lucknow, India

2019-2020

EXPERIENCE

Airkrit India | *Internship* | *Data Analyst*

May - Aug 2026

- Built data preprocessing pipelines (Python, Pandas, NumPy) on 10K+ records, applying cleaning, feature engineering, and anomaly detection techniques.
- Applied statistical analysis and pattern detection to identify sales and customer behavior trends, feeding into 15+ visualizations for stakeholder decision-making.
- Automated report generation using LLM-based summarization, reducing manual reporting time by 30%.

PROJECTS

RAGOps - Production RAG Evaluation & Optimization Platform | ([github](#))

Sep 2026 - Present

- Built a configurable RAG pipeline builder supporting 4 chunking strategies, 2 embedding models, and 3 retrieval modes, enabling comparison across 20+ pipeline configurations.
- Designed and implemented a multi-index ingestion architecture that parallelizes document embeddings across registered models, reducing document processing time by 20% and allowing pipelines to switch strategies without re-processing.
- Implemented evaluation and trace-level observability across retrieval, reranking, and generation, improving retrieval accuracy by 20% while tracking Recall@K, MRR, nDCG, faithfulness, latency, token usage, and cost.

Ambiguity-Aware RAG Text-to-SQL System | *Python, FastAPI, RAG, LangChain* ([github](#))

Aug - Sep 2026

- Built a RAG-based Text-to-SQL system using LLMs, embeddings, and vector search over PostgreSQL, achieving 87% SQL execution accuracy on 100+ test queries.
- Designed an ambiguity detection layer classifying queries as clear/ambiguous/invalid with 91% classification accuracy, reducing incorrect SQL execution by 35%.
- Built multi-turn clarification workflows for ambiguous queries (e.g., “best customer” by revenue/orders/frequency), with schema-aware retrieval across 20+ tables and 100+ columns, plus SELECT-only guardrails preventing destructive query execution.

LeaderLab - AI Job Search Agent | *Next.js, LangChain, LLM APIs, PostgreSQL* ([github](#))

May - July 2026

- Built an agentic job-search workflow using LangGraph and LLMs to interpret natural-language requests, saving 2 hours per week by autonomously executing job discovery and filtering tasks.
- Developed resume-aware retrieval and LLM-based job matching, extracting candidate skills to generate relevance scores and prioritize opportunities, increasing match relevance accuracy by 15%.
- Added agent state and conversational memory to maintain user preferences and context, reducing redundant search inputs by 25% across multi-step job-search workflows.
- Implemented LangChain tool calling to connect the agent with job-search and ranking tools, enabling dynamic selection and reducing task execution latency by 10%.

TECHNICAL SKILLS

Languages: Python, Java, JavaScript, SQL

AI/ML: LLMs, RAG, Prompt Engineering, Vector Search, Model Evaluation, PyTorch, Hugging Face

Frameworks: LangChain, LangGraph, FastAPI, Next.js

Databases & Tools: PostgreSQL, Git, GitHub, OpenAI, Gemini

CERTIFICATIONS

Oracle Cloud Infrastructure 2025 Certified Generative AI Professional

30 Sep 2025
